

You can advance new **MMA** treatments by joining AllStripes and the JUMP study

Because methylmalonic acidemia is rare, researchers need more information directly from patients and their families to understand the disease.

Your medical history contains important clues to help researchers understand the natural disease progression and develop new treatments.

How you can help

Participate in the **JUMP (Journey to Understand MMA and PA) study** from home by joining the MMA research program on AllStripes, a rare disease research platform. JUMP will help HemoShear Therapeutics gain insight for their potential new oral therapy, and the information you contribute can help power other research studies for MMA and PA.

1. Go to allstripes.com/mma

2. Create your account

Sign up, review our research consents and share the names of your health facilities (about 10-15 minutes). No appointments, no uploads.

3. Success — you're a hero for MMA!

We collect and de-identify your medical records to power research. You'll receive research updates and all your records in a private, secure account **at no cost**.

What is AllStripes?

As the leading research platform dedicated to rare diseases, AllStripes makes it easy for patients to contribute to new treatment studies from home.

We do the work to collect and analyze your de-identified medical records to help power faster, better drug development for your condition.

To learn more contact us at community@allstripes.com or visit allstripes.com.
