

HemoShear Therapeutics Appoints Organizational Development Leader and Recruiter as Company Grows

As HemoShear expands its clinical and discovery programs, the company has appointed Paul Sartori, PhD, Vice President of Organizational Development and Human Resources.

"We have initiated clinical development of HST5040 to treat methylmalonic and propionic acidemias and we are expanding our discovery pipeline to tackle additional rare diseases," says Jim Powers, CEO. "Paul brings valuable insight and experience to our organization as we advance investigational treatments designed to help improve health outcomes for patients."

"I'm excited about working with the team at HemoShear and being able to further build the organization," says Dr. Sartori. "I am inspired by HemoShear's unique combination of intellect, values, and wonderful culture shared by all its people."

Dr. Sartori has a 35+ year career serving as a global VP/EVP and/or Chief Human Resources Officer for major firms such as CIBA-Corning, Novartis, Bausch & Lomb, and Covance. He also has wide ranging experience serving as a VP for Organization Development, and Advisor to the CEO and Board for developing companies, from pre-clinical stage to commercial, and across pharma, biotech, diagnostics and medical devices.

Recruiter Appointed to Focus on Talent

HemoShear has also appointed Wanda Craddock director of talent acquisition to spearhead recruitment as the company rapidly expands.

"With the collaborative culture at HemoShear, the scientific firepower of the research team and the dedication to helping improve lives, I am confident that we will continue to attract incredible talent to accelerate the company's progress," says Wanda.

Wanda has spent 24 years in the clinical research industry, helping companies build successful teams. Her career spans across various recruiting and resource management roles within small and large organizations. She has recruited in most therapeutic areas, including rare disease and oncology

HemoShear is currently hiring for several positions in scientific research, clinical operations and administration. For a list of job postings, visit our [careers page](#). Please spread the word across your network and [follow us on LinkedIn](#) for updates.
